

# Let's Talk About Breathability

There's a trade-off with traditional welding helmet designs: a more "open design" allows better air circulation, but it also increases your exposure to hazards.

On the other hand, the Speedglas® 9000 breathable helmet extends throat and side protection while greatly increasing air circulation. Four patented, aerodynamically-designed, exhaust vents remove CO<sub>2</sub>-laden exhaled air without letting in welding smoke.

Welder experience lower humidity, less heat, and reduced CO<sub>2</sub> levels. (Elevated CO<sub>2</sub> levels cause "stuffiness," fatigue, and headaches.) Plus, welders get the world's most reliable auto-darkening lens.

## The Harder You Weld, The Better It Feels

At a 125-watt exertion level (as measured on a laboratory exercise bike), the Speedglas 9000 helmet creates:

- 27%-55% less CO<sub>2</sub>
- 9%-24% less fatigue
- 28%-50% better air quality\*

\*University study available upon request. 9000 helmet was tested against two traditional helmets, one with an "open" (and therefore more exposed) design. 87.5% of tested welders considered the Speedglas helmet superior in every way.
